I disagree with the concept mentioned. Science has substantial drawbackings in terms of human psychology or their intentions. Being enriched in technology can help our works to be done in easier manner. None of these pheomenons can eradicate the socio-political-religious conflicts. As we have been watching the current scenario in technologically developed countries like USA, Europe, Russia ertc. They have a thing common that is they are very advanced. But crimes caused by middle eastern migrants in those countries don't increase. So being advanvced inscience and technology can't upgrade the moral values of the people coming there. Being advanhced in sciene can't teach us which is good or which is bad. This can't help to understand human psychology or human motives. Though psychology deals with human brain nature alongside human behaviour.

This essay demonstrates some competence in addressing the prompt but is seriously flawed in several key areas. The analysis is limited, the organization is weak, and there are frequent errors in grammar and usage that obscure meaning.

Firstly, the essay does present a position on the issue, which is a positive aspect. The writer disagrees with the idea that science and technology can solve all of society's problems. However, the development of this position is limited and lacks depth. The essay provides some reasons, such as the inability of science to address human psychology, moral values, and socio-political-religious conflicts, but these points are not fully developed or supported with compelling examples.

The organization of the essay is also problematic. The ideas are not clearly connected, and the essay lacks a coherent structure. For example, the mention of crimes caused by middle eastern migrants in technologically advanced countries is not clearly linked to the main argument and seems out of place. Additionally, the essay jumps from one idea to another without clear transitions, making it difficult to follow the writer's line of reasoning.

The language and sentence structure in the essay are weak, with frequent errors that interfere with meaning. There are numerous spelling mistakes (e.g., "drawbackings," "pheomenons," "advanvced," "Thoush," "delas," "alongs," "advanhced," "sciene," "clashed," "techs"), incorrect word choices (e.g., "interned," "award" vs. "awkward"), and grammatical errors (e.g., "None of these pheomenons can eradicate the socio-political-religious conflicts"). These errors make the essay difficult to read and understand.

To improve this essay, the writer should focus on the following areas:

1. **\*\*Developing Ideas\*\***: Provide more in-depth analysis and support the main points with relevant and persuasive examples.

2. **Organization**: Create a clear structure with well-organized paragraphs and logical transitions between ideas.
3. **Language and Mechanics**: Pay attention to grammar, spelling, and word choice. Proofreading and editing the essay can help catch and correct errors.

### Ties to the Rubric

- The essay is unclear or seriously limited in addressing the specific task directions and in presenting or developing a position on the issue or both, which aligns with a score of 2.
- It provides few relevant reasons or examples in support of its claims.
- The essay is poorly focused and poorly organized.
- It has serious problems in language and sentence structure that frequently interfere with meaning.

I disagree with the concept mentioned. Science has substantial ~~drawbackings~~ drawbacks in terms of human psychology ~~or their and~~ intentions. Being enriched in technology can help our ~~workwork~~ to be done in easier manner. ~~None of more easily.~~ However, these ~~pheomenons can~~ phenomena cannot eradicate the socio-political-religious conflicts. As we have been watching the current scenario in technologically developed countries like USA, Europe, Russia ~~erte.~~ They and Russia, they have ~~aone~~ one thing ~~common that is in~~ common; they are very advanced. But crimes caused by middle-eastern migrants in those countries don't ~~increase.~~ decrease. So being ~~advanved in science~~ advanced in science and technology can't upgrade the moral values of the ~~people coming there.~~ people. Being ~~advanheed~~ advanced in ~~seien~~ science can't teach us ~~which~~ what is good or ~~which is~~ bad. This can't help to understand human psychologies or human motives. ~~Thoush~~ Though psychology ~~delas~~ deals with human brain nature ~~alongtside~~ alongside human behaviour, ~~behavior,~~ it actually fails to predict criminal attitudes. Science can't stop a man from being criminal because it doesn't provide any moral foundation. ~~Again~~ Again,

problems involving political anarchy and clashes between different faiths and ideologies ~~can come up a little~~  
~~with a solution~~can't be fully solved with the help of science and technology. ~~Thus~~Thus, we can't ~~stop~~stop criminal  
~~attitude~~attitudes, political and cultural ~~dividism~~divisions, or ~~elashed~~clashes based on faiths or ideologies using  
science and ~~techs~~technology alone.
